

ELESSAR

PITCH

BRIEF.

6 slides. 3 minutes. One zoom call.
100 other pitches today.
This one will be different.

OFF-WHITE BACKGROUND
BLACK TYPE. RED TYPE.
NOTHING ELSE.

The one thing they remember when they close the Zoom tab:

"Three students found 110 million forints lost in one department.
There are 163 hospitals in Hungary."

This is not a design brief. It is a design weapon. Every decision in here exists to fracture attention and make 5 judges forget the 99 pitches they sat through before yours.

THE DESIGN LAW.

Read this before opening Figma. Then close it. Design from memory.

THE PALETTE — AND NOTHING ELSE

F5F3EE

Off-white. Background only.

0A0A0A

Near-black. Primary type.

CC0000

Red. For the thing that matters.

NOTHING

No blue. No purple. No teal.

TYPOGRAPHY — TWO FONTS, USED VIOLENTLY

ARIAL BLACK

Headlines. Numbers. Anything that should hit like a fist. Scale it up until it feels wrong, then go bigger.

Arial Regular

Body. Annotations. The quiet voice underneath the screaming headline. Never bold. Never decorative.

SCALE — THE ILLEGAL PART

Most slides use 3-4 type sizes. Yours should use 2: massive and small. Nothing in between. The contrast IS the design. A headline at 200pt next to a caption at 12pt is not a mistake — it is a decision.

If everything is big, nothing is big.

One thing per slide gets to be massive. Everything else gets out of the way.

ALIGNMENT — BREAK IT WITH INTENTION

Left-aligned by default. But the massive number on slide 02 can bleed off the right edge. The headline on slide 01 can sit so low it almost falls off the bottom. Misalignment that looks like a mistake is a mistake. Misalignment that looks intentional is design.

ANIMATION — ONE RULE

If you animate, animate one thing per slide. The number counting up. The headline appearing word by word. One reveal. Not a sequence. Not a build. One thing that moves and then everything holds.

The silence opening (slide 00) is the only moment with no visual movement. Black screen. Nothing animates. Let the silence do the work.

WHAT YOU ARE NOT ALLOWED TO DO

NO gradients. Not even subtle ones.

NO rounded corners on anything. Sharp edges only.

NO icons. If you need an icon you need better copy.

NO stock photography. No hospital images. No hands holding tablets.

NO slide titles in the top left corner like a PowerPoint from 2009.

NO more than 3 elements on any slide. Count them. If it's 4, kill one.

NO animations that last longer than 0.4 seconds.

NO brand colors that aren't in the three-color palette.

NO bullet points. Ever. In any form.

THE OPENING

before slide 01 — this is not a slide, it is a weapon

WHAT HAPPENS

Black screen. No logo. No title. No music.

8 seconds of complete silence on Zoom.

Then: "That's how long it takes a hospital to lose 300,000 forints. We timed it."

THE SLIDE

One slide. Background: pure black (#0A0A0A). No text. Nothing. The silence IS the slide.

After the presenter speaks — cut to slide 01 immediately. Do not linger on black.

WHY THIS WORKS ON ZOOM SPECIFICALLY

Zoom creates social anxiety around silence. After 3 seconds, every judge will check their wifi. After 5 seconds someone will unmute to ask if you're there. You speak at exactly 8 seconds — before they do. The relief they feel when you speak makes them pay attention. You have earned their focus before slide 01.

REHEARSE THE SILENCE. Actually do it on a Zoom call.

8 seconds is longer than your team thinks.

The person who breaks the silence loses the pitch.

01

THE WOUND

make them feel it before they understand it

THE SLIDE — EXACTLY THIS

**THE EXPORT
RUNS EVERY
MONTH.**

**No one knows
what it says.**

DESIGN EXECUTION

Two typographic moments. Black for the system that works. Red for the failure inside it. Nothing else on this slide. No chart. No icon. No subheading.

The black lines should be as wide as the slide. The red lines slightly smaller — as if they're underneath the black, barely visible, the thing the system is hiding.

*Animation option: black text appears first. Holds for 1.5 seconds.
Then red text fades in slowly — 0.8 seconds — like it's being revealed.
Like it was always there and you're only now allowed to see it.*

WHAT THE PRESENTER SAYS

"A data analyst we interviewed confirmed it.
Hungarian hospitals export their financial data every month.
The exports are accurate. The systems work.
Nobody reads them."

Do NOT say 'problem' or 'challenge' on this slide.

Do NOT show a statistic here. The number is on slide 02.

Do NOT explain. The copy explains itself.

02

THE NUMBER

one number. the entire slide.

THE SLIDE — EXACTLY THIS

110,000,000
0

Ft

one department. one hospital. our model.

x163

hospitals in Hungary

~8B Ft

if the pattern holds

DESIGN EXECUTION

110,000,000 in red should be so large it bleeds off the right edge of the slide. Not an accident. A choice. The number is too big for the frame. That is the point.

'If the pattern holds' must be visible and small. It is the honesty footnote. It is also the thing that makes you credible when every other team is faking precision.

*Animation option: the number counts up from 0 to 110,000,000.
Fast at first. Slowing down. Stopping. The count itself is uncomfortable.
Duration: 2.5 seconds maximum.*

WHAT THE PRESENTER SAYS

"This is from our model — calibrated to Semmelweis 2024 public financials.
One department. Not the whole hospital.
If the pattern holds across 163 hospitals, the system loses roughly 8 billion forints a year.
Not stolen. Not mismanaged. Just invisible."

03

THE INSIGHT

the thing nobody built a product around. until now.

THE SLIDE — EXACTLY THIS

SAME DATA.

CFO

sees strategy.

One upload.

ANALYST

sees waste.

DESIGN EXECUTION

SAME in black. DATA. in red. The period on DATA is doing heavy lifting — it is a full stop before the reveal. Don't remove it.

The CFO / ANALYST split is typographic — two columns, collision of scale. They are competing for the same data and the type should feel like that tension.

'One upload.' at the bottom. Small relative to everything else. Quiet. The payoff after the tension.

*Animation option: 'SAME DATA.' appears first and holds.
Then the two columns appear simultaneously — left and right at once, as if splitting.
Then 'One upload.' fades in below. Slow. 0.6 seconds.*

THE INSIGHT — WHAT THE PRESENTER SAYS

"The problem was never collection. Hospitals already export everything.
The problem is translation — and not one translation. Two.
A CFO and a procurement analyst need completely different views of identical numbers.
Generic BI tools make you choose one.
Elessar gives you both."

04

THE PROOF

hand them the product while you keep talking

THE SLIDE — EXACTLY THIS

OPEN IT NOW.

[QR CODE — LARGE, CENTERED, MINIMUM 6CM × 6CM]

Synthetic data · Semmelweis 2024 public financials · domain expert interviews

DESIGN EXECUTION

The QR code is the largest element on this slide after the headline. It should be scannable from a laptop screen at arm's length. Test it. If it doesn't scan in 3 seconds, make it bigger.

The footnote is not a disclaimer. It is proof of intellectual honesty. It stays. Make it small but not invisible — 10pt, gray, bottom of slide.

No feature list. No screenshot. No mockup. The product is live. Let it speak.

WHAT THE PRESENTER SAYS — WORD FOR WORD

"We don't have a live hospital yet.
What we do have is a working product you can open right now.
Executive view. Analyst view. Same data. Two completely different interfaces.
Scan it. We'll keep talking."

Then pause for 10 seconds. Let them scan. Keep your face neutral. Don't fill the silence.

Do NOT say 'pilot.' You will be asked which hospital. You will have no answer.

Do NOT say 'demo.' It implies it's fake. It's not fake.

Say 'working prototype' or 'the actual product.' Both are true.

05

THE MACHINE

draw it so a 10-year-old could explain it back

THE SLIDE — EXACTLY THIS

EXPORT

UPLOAD

COMPUTE

DECIDE

CT-Ecostat, Medworks, procurement
CSV → Elessar web platform
NEAK DRG logic, deficit per procedure,
SKU fragmentation, expiry waste
Executive view + Analyst view

No installation. No IT project.

Works with what they already have.

DESIGN EXECUTION

The flow is vertical — EXPORT to DECIDE — down the left side. The red arrows between each step are the only decoration allowed. The annotations on the right are small and gray. The two headlines at the bottom are the payoff.

NEAK DRG logic should be called out visually at the COMPUTE node — it is the moat. A small tag or annotation. Not explained. Just named. The judges who understand it will lean forward.

06

WHY YOU. WHY NOW.

the argument. not the team photo.

THE SLIDE — EXACTLY THIS

GLOBAL VENDORS

WON'T.

We already did.

NEAK DRG

Hungarian hospital billing logic built in. PowerBI doesn't have it. SAP doesn't have it. We do.

NETWORK

Márton's real hospital relationships through EPC Healthcare. Not a cold door.

6 MONTHS

Domain ontology, data mappings, validation rules. The boring work that nobody wants to do twice.

WHAT THE PRESENTER SAYS

"Hungary has 163 hospitals. Too small for global vendors to care about.
Too specific for anyone to build Hungarian NEAK logic for.
We built it anyway. That's the door they left open.
We're already through it."

Then state the ask. What you need. What it buys. What milestone it reaches. (Fill in the specific numbers before the pitch.)

THE LAST LAW.

When the judges close the Zoom tab, they will remember one thing or they will remember nothing.

"Three students found 110 million forints lost in one department.
There are 163 hospitals in Hungary."

Every design decision in this deck exists to make that sentence land harder.

If a slide doesn't serve that sentence, cut it.

That's the only brief.
